XX Composition containing analogues of vasoactive intestinal peptide,
PT somatostatin - bombesin and substance P, for treatment of tumours
PT and for inhibiting over-expression of these peptide(s)

PS Claim 1; Page 4; 49pp; English.

XX The invention relates to a new composition which comprises: (i) the
CC somatostatin analogue, SOM2 AGCKNFRDWTPTNSDC (3-14 disulphide bridge),
CC and (ii) at least 4 of the peptides: antagonist of vasoactive
CC intestinal peptide (VIP1); VIP receptor-binding inhibitor (VIP2); VIP
CC receptor antagonist (VIP3); somatostatin analogue (SOM1); bombesin
CC antagonist (BOM1) and substance P antagonist (SP1). Also claimed are
CC more general compositions containing peptide analogues of somatostatin,
CC VIP, bombesin and substance P. The compositions are used in human or
CC veterinary medicine: (a) to kill (or inhibit multiplication of) tumour
CC or cancer cells, particularly for treatment of leukaemia, lymphoma,
CC adenocarcinoma of stomach, pancreas or prostate, or cancer of lung,
CC breast, kidney or particularly rectum and colon, and (b) to prevent,
CC inhibit or modulate over-expression of, e.g. VIP. A wide range of cancer
CC cells express receptors for VIP, somatostatin, bombesin and/or substance
CC P. The present sequence represents VIP receptor-binding inhibitor
CC (VIP2).

XX Novel therapeutically active composition comprising at least 5
PT peptides, useful for treating angiogenesis especially as a result of
PT adenocarcinomas -
XX Disclosure; Page 8; 42pp; English.
XX The present sequence represents an analogue of vasoactive intestinal
CC peptide (VIP). The specification describes therapeutically active

CC compositions comprising at least one analogue of somatostatin (chosen
CC from SOM1 and SOM2) and at least four analogues chosen from VIP1 (a
CC VIP antagonist), VIP2 (a VIP receptor binding inhibitor), VIP3 (a VIP
CC receptor antagonist), BOM1 (a bombesin antagonist), and SP1 (a substance
CC P antagonist). The combination of these 7 analogues is known as MuJ-7.
CC MuJ-7 is used as an anticancer drug to restrict tumour growth and spread
CC by inhibiting tumour angiogenesis. MuJ-7, in addition, inhibits
CC metastasis through its antiangiogenic activity in all cancers. The
CC peptides are useful for the treatment and prevention of angiogenesis,
CC especially as a result of adenocarcinomas of the colon, breast, lung,
CC prostate, kidney, leukemias or lymphomas.

PS Claim 3; Page 89-90; 97pp; Japanese.

XX This sequence represents a novel human enamelysin (MMP-20) protein, a
 CC matrix metalloproteinase with substantial activity of decomposing enamel
 CC protein or similar activity. The products described in this invention can
 CC be used in the study of teeth development, enamel maturation process
 CC especially the formation of enamel or mineralisation of teeth matrix, and
 CC for medical, clinical and other applications. The proteins, their salts
 CC or peptide fragments, DNAs, promoters and inhibitors of biological
 CC activity of these proteins etc. can also be used as drugs.

XX Isolated nucleic acid encoding human metallo-protease(s) - used for
 PT diagnosis, treatment and prevention of, e.g. cancer, inflammation,
 PT neurological disease and infections

XX Claim 20a; Fig 4; 81pp; English.

XX This sequence represents a novel human matrilysin-like protein which is
 CC an inhibitor of the members of the matrix metalloproteinase, MMP.
 CC family. This protein can be used in assays to screen for agonists and
 CC antagonists and the nucleic acid is used as a probe for gene mapping. In

CC situ hybridisation and detection of corresponding genes in human tissue,
 CC and as sources of probes and primers for diagnosis. The protein and its
 CC antigenic fragments are used to raise antibodies (Ab) (which can be used
 CC for diagnosis in usual immunoassays or for in vivo imaging) and to screen
 CC for (ant)agonists. Agonists can be used to treat cancer or other
 CC conditions associated with underexpression of TNF-alpha. Antagonists are
 CC used to treat diseases associated with degeneration of the extracellular
 CC matrix (cancer, arthritis, cardiovascular disease, cachexia and multiple
 CC sclerosis).

New truncated mutant of 92 kDa gelatinase which is catalytically active, but is inactive against insoluble elastin, useful for treating disorders requiring the removal of excess connective tissues such as keloids	
Examples; Fig 2; 1lpp; English.	
The present invention relates to a truncated mutant (92 CD) of the 92 kDa gelatinase (see AAB68681). The truncated protein is useful for treating disorders requiring the removal of excess connective tissue, e.g. keloids, post-operative fibrosis, intervertebral disc injections, hypertrophic scars, wound debridement, post-surgical adhesions and various fibrotic diseases (scleroderma, idiopathic pulmonary fibrosis). Gelatinase is a matrix metalloproteinase and is also known as gelatinase B and MMP-9. The truncated protein is catalytically active comparable to the full protein but unlike the full protein is essentially inactive against insoluble elastin. The present invention is the catalytic domain of matrilysin, which was used in a sequence homology alignment with the 92 CD protein of the present invention. Matrilysin is also a matrix metalloproteinase.

PT diagnosis, treatment and prevention of, e.g. cancer, inflammation,
PT neurological disease and infections
XX
XX Disclosure; Fig 5; 81pp; English.
CC This sequence represents the human matrilysin protein which is an
CC inhibitor of the members of the matrix metalloproteinase, MMP, family.
CC This protein is used in the identification of a novel human
CC matrilysin-like protein which can be used in assays to screen for
CC agonists and antagonists and the nucleic acid is used as a probe for gene
CC mapping, in situ hybridisation and detection of corresponding genes in
CC human tissue, and as sources of probes and primers for diagnosis. The
CC protein and its antigenic fragments are used to raise antibodies (Ab)
CC (which can be used for diagnosis in usual immunoassays or for in vivo
CC imaging) and to screen for (ant)agonists. Agonists can be used to treat
CC cancer or other conditions associated with underexpression of TNF-alpha.
CC Antagonists are used to treat diseases associated with degeneration of
CC the extracellular matrix (cancer, arthritis, cardiovascular disease,
CC cachexia and multiple sclerosis).

PT vessels etc.
PT

XX Claim 7; Page 4; 7pp; Japanese.
PS

XX AAT27538 is a copy of the human matrilysin gene which can be
CC engineered so it can be expressed in E. coli as an immature protein
CC with a signal peptide directing secretion of the protein into the
CC periplasm. The protein was shown to be expressed easily in E. coli in
CC its active form. Matrilysin produced can be used as a cell-dispersal
CC reagent e.g. to remove animal cells from the wall of a vessel such as
CC a test tube, or to separate specific cells from various animal
CC tissues to aid in the study of medical chemistry, biochemistry or
CC pharmacy.

 XX
 CC AAC77607 to AAC78448 encode the human cancer associated proteins given
 CC in AAB43398 to AAB44239. The proteins can have activities based on the
 CC tissues and cells the genes are expressed in. Example of activities
 CC include: cytostatic; proliferative; vulnery; immunomodulator;
 CC antidiabetic; antiasthmatic; antirheumatic; antiarthritic;
 CC antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral;
 CC dermatological; neuroprotective; cardiac; thrombolytic; coagulant;
 CC neoplastic; vasotropic; antipsoriatic and antiangiogenic. The
 CC polynucleotides and polypeptides can be used for preventing, treating or
 CC ameliorating medical conditions and diagnosing pathological conditions.
 CC polynucleotides, polypeptides, antibodies, agonists and antagonists from
 CC the present invention may be used to treat immune disorders by activating
 CC inhibiting the proliferation, differentiation or mobilisation of
 CC immune cells, to treat disorders of haematopoietic cells, autoimmune
 CC disorders, allergic reactions, graft versus host disease and organ
 CC rejection, modulate haemostatic or thrombolytic activity, modulate
 CC bacterial or viral infections. The peptides, nucleotides, antibodies,
 CC agonists and antagonists may be also be used in drug screens. AAC78449 to
 CC AAC78457 and AAB44240 represent sequences used in the exemplification of
 CC the present invention.

RT "The metalloproteinase matrilysin is preferentially expressed by epithelial cells in a tissue-restricted pattern in the mouse."

RL Mol. Biol. Cell 6:851-869(1995).

CC -1- FUNCTION: DEGRADATES CASEIN, GELATINS OF TYPES I, III, IV, AND V, AND FIBRONECTIN. ACTIVATES PROCOLLAGENASE (BY SIMILARITY).

CC -1- FUNCTION: MAY PLAY A ROLE IN TISSUE REORGANIZATION.

CC -1- CATALYTIC ACTIVITY: CLEAVAGE OF 14-ALA-|-LEU-15 AND 16-TYR-|-LEU-17 IN B CHAIN OF INSULIN. NO ACTION ON COLLAGEN TYPES I, II, IV, V. CLEAVES GELATIN CHAIN ALPHA-2(I) > ALPHA-1(I).

CC -1- COFACTOR: REQUIRES CALCIUM AND ZINC FOR ACTIVITY.

CC -1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M10A (ZINC METALLOPROTEASE) ALSO KNOWN AS MATRINXIN SUBFAMILY.

CC This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. Jaggi M, Mukherjee R;
WPI: 1998-208959/19.
Composition containing analogues of vasoactive intestinal peptide,
somatostatin - bombesin and substance P, for treatment of tumours
and for inhibiting over-expression of these peptide(s)

PS Claim 1; Page 4; 49pp; English.

XX The invention relates to a new composition which comprises: (i) the
CC somatostatin analogue SOM2 AGCKNFFDKPTSDC (3-14 disulphide bridge),
CC and (ii) at least 4 of the peptides: antagonist of vasoactive
CC intestinal peptide (VIP1); VIP receptor-binding inhibitor (VIP2); VIP
CC receptor antagonist (VIP3); somatostatin analogue (SOM1); bombesin
CC antagonist (BOM1) and substance P antagonist (SPI). Also claimed are
CC more general compositions containing peptide analogues of somatostatin,
CC VIP, bombesin and substance P. The compositions are used in human or
CC veterinary medicine: (a) to kill (or inhibit multiplication of) tumour
CC or cancer cells, particularly for treatment of leukaemia, lymphoma,
CC adenocarcinoma of stomach, pancreas or prostate, or cancer of lung,
CC breast, kidney or particularly rectum and colon, and (b) to prevent,
CC inhibit or modulate over-expression of, e.g. VIP. A wide range of cancer
CC cells express receptors for VIP, somatostatin, bombesin and/or substance
CC P. The present sequence represents VIP receptor-binding inhibitor
CC (VIP2).

XX Novel therapeutically active composition comprising at least 5
PT peptides, useful for treating angiogenesis especially as a result of
PT adenocarcinomas -

XX Disclosure; Page 8; 42pp; English.

PS The present sequence represents an analogue of vasoactive intestinal
CC peptide (VIP). The specification describes therapeutically active

CC compositions comprising at least one analogue of somatostatin (chosen
CC from SOM1 and SOM2), and at least four analogues chosen from VIP1 (a
CC VIP antagonist), VIP2 (a VIP receptor binding inhibitor), VIP3 (a VIP
CC receptor antagonist), BOM1 (a bombesin antagonist), and SPI (a substance
CC P antagonist). The combination of these 7 analogues is known as MuJ-7.
CC MuJ-7 is used as an anticancer drug to restrict tumour growth and spread
CC by inhibiting tumour angiogenesis. MuJ-7, in addition, inhibits
CC metastasis through its antiangiogenic activity in all cancers. The
CC peptides are useful for the treatment and prevention of angiogenesis,
CC especially as a result of adenocarcinomas of the colon, breast, lung,
CC prostate, kidney, leukemias or lymphomas.

XX

XX New nucleic acid molecules encoding 48 human secreted proteins for

PT diagnosing, preventing, treating or ameliorating medical conditions and

PT used as food additives or preservatives -

XX

PS Disclosure; Page 453-455; 480pp; English.

XX

CC AAF22316 to AAF22363 encode the human secreted proteins given in AAB63049

CC to AAB63096. AAB63097 to AAB63132 represent more human secreted proteins

CC and polypeptides homologous to them. Human secreted proteins have

CC activities based on the tissues and cells the genes are expressed in.

CC Examples of activities include: immunosuppressive; antiarthritic;

CC antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic;

CC cerebroprotective; neotropic; neuroprotective; antibacterial; virucide;

CC fungicide; ophthalmological; and vulnerary. The polynucleotides and

CC proteins can be used to prevent, treat or ameliorate a medical condition

CC in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or

CC sheep. They are also used in diagnosing a pathological condition or

CC susceptibility to a pathological condition. Disorders which are diagnosed

CC or treated include autoimmune diseases e.g. rheumatoid arthritis,

CC hyperproliferative disorders e.g. neoplasms of the breast or liver,

CC cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders

CC e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g.

CC Alzheimer's disease, infections caused by bacteria, viruses and fungi and

CC ocular disorders e.g. corneal infection. The polypeptides can also be

CC used to aid wound healing and epithelial cell proliferation, to prevent

CC skin aging due to sunburn, to maintain organs before transplantation, for

CC supporting cell culture of primary tissues, to regenerate tissues and in

CC chemotaxis. The polypeptides can also be used as a food additive or

CC preservative to increase or decrease storage capabilities, fat content,

CC lipid, protein, carbohydrate, vitamins, minerals, cofactors and other

CC nutritional components. AAF22307 to AAF22315 and AAB63048 represent

CC sequences used in the exemplification of the present invention.

PT Human G protein coupled protein receptor peptides useful for the
PT prevention, diagnosis and treatment of cell proliferative, neurological
PT and immune disorders -

XX Claim 1; Page 65-67; 71pp; English.

XX The invention provides human G protein coupled protein receptor (HGPRP)
CC polypeptides and polynucleotides encoding them. The polypeptides can be
CC produced by standard recombinant methodology. The polynucleotides and
CC polypeptides may be used in the prevention, treatment and diagnosis of
CC diseases associated with their inappropriate expression. Diseases that
CC can be treated are cell proliferative disorders (e.g. arteriosclerosis,
CC atherosclerosis and hepatitis), cancers (e.g. leukemia, melanomas and
CC adenocarcinoma), immune disorders (e.g. anemia, asthma and Crohn's
CC disease) and neurological disorders (e.g. epilepsy, Alzheimer's disease
CC and Parkinson's disease). The anti-HGPRP antibodies may also be used as
CC diagnostic agents for detecting the presence of HGPRP polypeptides in
CC samples (e.g. by enzyme linked immunosorbent assay (ELISA)). Sequences
CC AAY57283-288 represent the HGPRP polypeptides.

XX Disclosure; Column 13; 95pp; English.

XX This sequence represents a tyrosine phosphorylation site/SH2 docking
CC domain found in the amino acid sequence of the mouse and human "tub"
CC proteins (AAW75450 and AAW75451 respectively). The invention relates to
CC a method for identifying compounds that modulate tub protein activity,
CC especially its interaction with proteins containing an SH2 domain. The
CC method can be used for identifying compounds which modulate tub protein
CC activity for use in the treatment of mammalian body weight disorders
CC including obesity, cachexia and anorexia.

CC AAX40826 to AAX41093 represent 5' expressed sequence tags (ESTs) for
CC human secreted proteins, and encode the proteins given in AAY01602 and
CC AAY11994 to AAY12260, respectively. The proteins given represent the
CC signal peptide and an N-terminal fragment of a secreted protein. The
CC nucleic acid sequences can be used for producing secreted human gene
CC products. They can also be used to develop products for diagnosis and
CC therapy. The proteins obtained may have cytokine activity, cell
CC proliferation/differentiation activity, haematopoiesis-regulating
CC activity, tissue growth regulating activity, reproductive hormone
CC regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC activity, tumour inhibition activity or other activities. The products
CC can be used in forensic, gene therapy and chromosome mapping procedures.
CC The sequences can also be used for obtaining corresponding promoter
CC sequences. The nucleic acids encoding the signal peptide can be used
CC for directing extracellular secretion of a polypeptide or the insertion
CC of a polypeptide into a membrane, or importing a polypeptide into
CC a cell.

DR New gelatinase truncated mutant useful for treating disorders requiring
 PT the removal of excess connective tissue, e.g. keloids, post-operative
 PT fibrosis, intervertebral disc injections, hypertrophic scars

XX Example; Column 13-16; l1pp; English.

CC The present invention describes a cDNA sequence which encodes the
 CC truncated mutant of the 92 kDa gelatinase having an amino acid sequence
 CC as given in AAB74617 consisting of residues 106-216 fused to residues
 CC 391-443 of the parent molecule. The truncated mutant has dermatological
 CC and vulnary activities. The truncated mutant is useful for treating
 CC disorders requiring the removal of excess connective tissue,
 CC e.g., keloids, post-operative fibrosis, intervertebral disc injections,
 CC hypertrophic scars, wound debridement, post-surgical adhesions and
 CC various fibrotic diseases (including scleroderma, idiopathic pulmonary
 CC fibrosis). The truncated mutant is catalytically active compared to
 CC the full protein. Unlike the full protein, the truncated mutant is
 CC essentially inactive against insoluble elastin, and does not require
 CC activation to be enzymatically active. The present sequence represents
 CC a 72 kDa gelatinase catalytic domain (72 CD) containing protein, which
 CC is given in the exemplification of the present invention.

XX (UNIW) UNIV WASHINGTON.

XX Senior RM;

XX WPI; 2001-202001/20.

XX New truncated mutant of 92 kDa gelatinase which is catalytically
 PT active, but is inactive against insoluble elastin, useful for treating
 PT disorders requiring the removal of excess connective tissues such as
 PT keloids

XX Examples; Fig 2; l1pp; English.

XX The present invention relates to a truncated mutant (92 CD) of the 92
 CC kilo Dalton (kDa) gelatinase (see AAB68681). The truncated protein is
 CC useful for treating disorders requiring the removal of excess connective
 CC tissue, e.g. keloids, post-operative fibrosis, intervertebral disc
 CC injections, hypertrophic scars, wound debridement, post-surgical
 CC adhesions and various fibrotic diseases (scleroderma, idiopathic
 CC pulmonary fibrosis). Gelatinase is a matrix metalloproteinase and is also
 CC known as gelatinase B and MMP-9. The truncated protein is catalytically
 CC active comparable to the full protein but unlike the full protein is
 CC essentially inactive against insoluble elastin. The present sequence is
 CC the catalytic domain of matrilysin, which was used in a sequence homology
 CC alignment with the 92 CD protein of the present invention. Matrilysin is
 CC also a matrix metalloproteinase.

XX Claim 20a; Fig 4; 8lpp; English.

CC This sequence represents a novel human matrilysin-like protein which is
CC an inhibitor of the members of the matrix metalloproteinase, MMP,
CC family. This protein can be used in assays to screen for agonists and
CC antagonists and the nucleic acid is used as a probe for gene mapping, in
CC situ hybridisation and detection of corresponding genes in human tissue,
CC and as sources of probes and primers for diagnosis. The protein and its
CC antigenic fragments are used to raise antibodies (Ab) (which can be used
CC for diagnosis in usual immunoassays or for in vivo imaging) and to screen
CC for (ant)agonists. Agonists can be used to treat cancer or other
CC conditions associated with underexpression of TNF-alpha. Antagonists are
CC used to treat diseases associated with degeneration of the extracellular
CC matrix (cancer, arthritis, cardiovascular disease, cachexia and multiple
CC sclerosis).

 RL Submitted (JUN-1996) to the EMBL/GenBank/DBJ databases.
 CC -!- FUNCTION: MAY BE INVOLVED IN TISSUE INJURY AND REMODELING. HAS
 CC SIGNIFICANT ELASTOLYTIC ACTIVITY (BY SIMILARITY).
 CC -!- CATALYTIC ACTIVITY: HYDROLYSIS OF SOLUBLE AND INSOLUBLE ELASTIN.
 CC SPECIFIC CLEAVAGES ARE ALSO PRODUCED AT 14-ALA-|-LEU-15 AND 16-
 CC TYR-|-LEU-17 IN THE B CHAIN OF INSULIN.
 CC -!- COFACTOR: REQUIRES CALCIUM AND ZINC FOR ACTIVITY (BY SIMILARITY).
 CC -!- SIMILARITY: CONTAINS 1 HEMOXEPIN-LIKE DOMAIN.
 CC -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M10A (ZINC
 CC METALLOPROTEASE) ALSO KNOWN AS MATRININ SUBFAMILY.

XX New nucleic acid molecules encoding 48 human secreted proteins for
XX diagnosing, preventing, treating or ameliorating medical conditions and
XX used as food additives or preservatives -
XX Disclosure; Page 453-455; 480pp; English.

AA022316 to AAF22363 encode the human secreted proteins given in AAB63049 to AAB63096. AAB63097 to AAB63132 represent more human secreted proteins and polypeptides homologous to them. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; neurotropic; neuroprotective; antibacterial; virucide; fungicide; ophthalmological; and vulnery. The polynucleotides and proteins can be used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. AAF22307 to AAF22315 and AAB63048 represent sequences used in the exemplification of the present invention.

PT Human G protein coupled protein receptor peptides useful for the
PT prevention, diagnosis and treatment of cell proliferative, neurological
XX and immune disorders -

XX Claim 1; Page 65-67; 71pp; English.

XX The invention provides human G protein coupled protein receptor (HGPRP)
CC polypeptides and polynucleotides encoding them. The polypeptides can be
CC produced by standard recombinant methodology. The polynucleotides and
CC polypeptides may be used in the prevention, treatment and diagnosis of
CC diseases associated with their inappropriate expression. Diseases that
CC can be treated are cell proliferative disorders (e.g. arteriosclerosis,
CC atherosclerosis and hepatitis), cancers (e.g. leukemia, melanomas and
CC adenocarcinoma), immune disorders (e.g. anemia, asthma and Crohn's
CC disease) and neurological disorders (e.g. epilepsy, Alzheimer's disease
CC and Parkinson's disease). The anti-HGPRP antibodies may also be used as
CC diagnostic agents for detecting the presence of HGPRP polypeptides in
CC samples (e.g. by enzyme linked immunosorbant assay (ELISA)). Sequences
CC AAY57283-288 represent the HGPRP polypeptides.

XX Human brain-derived G-protein coupled receptor protein and encoding DNA
XX used in gene therapy, is also useful for e.g. identifying ligands and
XX raising antibodies and antisera -

XX Claim 1; Fig 1; 80pp; Japanese.

XX This represents a human brain-derived G-protein coupled receptor
CC protein. The polypeptide can be expressed by standard recombinant
CC methodology. The novel G-protein coupled receptor protein can be used
CC for identifying ligands; raising antibodies and antisera; developing

CC receptor-binding assay system; and screening for drug candidates. The
CC encoding polynucleotide can be used in; probing for diagnostic genes;
CC constructing PCR primers; making transgenic animals; and in gene therapy.

XX a SH2 containing peptide, used to develop agents for treating e.g.
XX obesity, cachexia or anorexia

XX Disclosure; Column 13; 95pp; English.

XX This sequence represents a tyrosine phosphorylation site/SH2 docking
CC domain found in the amino acid sequence of the mouse and human "tub"
CC proteins (AAW75450 and AAW75451 respectively). The invention relates to
CC a method for identifying compounds that modulate tub protein activity,
CC especially its interaction with proteins containing an SH2 domain. The
CC method can be used for identifying compounds which modulate tub protein
CC activity for use in the treatment of mammalian body weight disorders
XX including obesity, cachexia and anorexia.

XX New nucleic acids encoding human secreted proteins - obtained from

XX cDNA libraries prepared from kidney, fetal kidney, dystrophic

XX muscle, muscle and heart tissue

XX

XX Claim 34; Page 598; 622pp; English.

XX

XX AAX40826 to AAX41093 represent 5' expressed sequence tags (ESTs) for

XX human secreted proteins, and encode the proteins given in AAX01602 and

XX AAX11994 to AAX12260, respectively. The proteins given in AAX01602 and

XX AAX11994 are N-terminal fragments of a secreted protein. The

XX nucleic acid sequences can be used for producing secreted human gene

XX products. They can also be used to develop products for diagnosis and

XX therapy. The proteins obtained may have cytokine activity, cell

XX proliferation/differentiation activity, haematopoiesis regulating

XX activity, tissue growth regulating activity, reproductively hormone

XX regulating activity, chemotactic/chemokinetic activity, haemostatic and

XX thrombolytic activity, receptor/ligand activity, anti-inflammatory

XX activity, tumour inhibition activity or other activities. The products

XX can be used in forensic, gene therapy and chromosome mapping procedures.

XX The sequences can also be used for obtaining corresponding promoter

XX sequences. The nucleic acids encoding the signal peptide can be used

XX for directing extracellular secretion of a polypeptide or the insertion

XX of a polypeptide into a membrane, or importing a polypeptide into

XX a cell.

PT New gelatinase truncated mutant useful for treating disorders requiring
 PT the removal of excess connective tissue, e.g. keloids, post-operative
 PT fibrosis, intervertebral disc injections, hypertrophic scars

PS Example; Column 13-16; 11pp; English.

XX The present invention describes a cDNA sequence which encodes the
 CC truncated mutant of the 92 kDa gelatinase having an amino acid sequence
 CC as given in AAB74617 consisting of residues 106-216 fused to residues
 CC 391-443 of the parent molecule. The truncated mutant has dermatological
 CC and vulnary activities. The truncated mutant is useful for treating
 CC disorders requiring the removal of excess connective tissue,
 CC e.g., keloids, post-operative fibrosis, intervertebral disc injections,
 CC hypertrophic scars, wound debridement, post-surgical adhesions and
 CC various fibrotic diseases (including scleroderma, idiopathic pulmonary
 CC fibrosis). The truncated mutant is catalytically active compared to
 CC the full protein. Unlike the full protein, the truncated mutant is
 CC essentially inactive against insoluble elastin, and does not require
 CC activation to be enzymatically active. The present sequence represents
 CC a 72 kDa gelatinase catalytic domain (72 CD) containing protein, which
 CC is given in the exemplification of the present invention.

XX New truncated mutant of 92 kDa gelatinase which is catalytically
 PT active, but is inactive against insoluble elastin, useful for treating
 PT disorders requiring the removal of excess connective tissues such as
 PT keloids

XX Examples; Fig 2; 11pp; English.

XX The present invention relates to a truncated mutant (92 CD) of the 92
 CC kilo dalton (kDa) gelatinase (see AAB68681). The truncated protein is
 CC useful for treating disorders requiring the removal of excess connective
 CC tissue, e.g. keloids, post-operative fibrosis, intervertebral disc
 CC injections, hypertrophic scars, wound debridement, post-surgical
 CC adhesions and various fibrotic diseases (scleroderma, idiopathic
 CC pulmonary fibrosis). Gelatinase is a matrix metalloproteinase and is also
 CC known as gelatinase B and MMP-9. The truncated protein is catalytically
 CC active comparable to the full protein but unlike the full protein is
 CC essentially inactive against insoluble elastin. The present sequence is
 CC the catalytic domain of matrilysin, which was used in a sequence homology
 CC alignment with the 92 CD protein of the present invention. Matrilysin is
 CC also a matrix metalloproteinase.

 XX Claim 20a; Fig 4; 81pp; English.

PT This sequence represents a novel human matrilysin-like protein which is
 CC an inhibitor of the members of the matrix metalloproteinase, MMP,
 CC family. This protein can be used in assays to screen for agonists and
 CC antagonists and the nucleic acid is used as a probe for gene mapping, in
 CC situ hybridisation and detection of corresponding genes in human tissue,
 CC and as sources of probes and primers for diagnosis. The protein can be used
 CC for diagnosis in usual immunoassays or for in vivo imaging and to screen
 CC for (antagonists). Agonists can be used to treat cancer or other to screen
 CC conditions associated with underexpression of TNF-alpha. Antagonists are
 CC used to treat diseases associated with degeneration of the extracellular
 CC matrix (cancer, arthritis, cardiovascular disease, cachexia and multiple
 XX sclerosis).

Isolated nucleic acid encoding human metallo-protease(s) - used for
 diagnosis, treatment and prevention of, e.g. cancer, inflammation,
 neurological disease and infections

Disclosure; Fig 5; 81pp; English.

XX This sequence represents the human matrilysin protein which is an
 CC inhibitor of the members of the matrix metalloproteinase, MMP, family.
 CC This protein is used in the identification of a novel human
 CC matrilysin-like protein which can be used in assays to screen for
 CC agonists and antagonists and the nucleic acid is used as a probe for gene
 CC mapping, in situ hybridisation and detection of corresponding genes in
 CC human tissue, and as sources of probes and primers for diagnosis. The
 CC protein and its antigenic fragments are used to raise antibodies (Ab)
 CC which can be used for diagnosis in usual immunoassays or for in vivo
 CC imaging) and to screen for (antagonists). Agonists can be used to treat
 CC cancer or other conditions associated with underexpression of TNF-alpha.
 CC Antagonists are used to treat diseases associated with degeneration of
 CC the extracellular matrix (cancer, arthritis, cardiovascular disease,
 XX cachexia and multiple sclerosis).

CC -1- FUNCTION: REQUIRED FOR TRANSPORT OF SECRETORY PROTEINS FROM THE

GOLGI COMPLEX. CATALYZES THE TRANSFER OF PHOSPHATIDYLINOSITOL AND

-1- SUBCELLULAR LOCATION: ASSOCIATED WITH THE GOLGI COMPLEX AS A

PERIPHERAL MEMBRANE PROTEIN (BY SIMILARITY).

CC -1- SIMILARITY: BELONGS TO THE SEC14 CYTOSOLIC FACTOR FAMILY.

Composition containing analogues of vasoactive intestinal peptide,
PT somatostatin - bombesin and substance P, for treatment of tumours
PT and for inhibiting over-expression of these peptide(s)
XX

Claim 1; Page 4; 49pp; English.

PS The invention relates to a new composition which comprises: (i) the
 CC somatostatin analogue SOM2 AGCKNFRDWTPTSDC (3-14 disulphide bridge),
 CC and (ii) at least 4 of the peptides: antagonist of vasoactive
 CC intestinal peptide (VIP1); VIP receptor-binding inhibitor (VIP2); VIP
 CC receptor antagonist (VIP3); somatostatin analogue (SOM1); bombesin
 CC antagonist (BOM1) and substance P antagonist (SP1). Also claimed are
 CC more general compositions containing peptide analogues of somatostatin,
 CC VIP, bombesin and substance P. The compositions are used in human or
 CC veterinary medicine: (a) to kill (or inhibit multiplication of) tumour
 CC or cancer cells, particularly for treatment of leukaemia, lymphoma,
 CC adenocarcinoma of stomach, pancreas or prostate, or cancer of lung,
 CC breast, kidney or particularly rectum and colon, and (b) to prevent,
 CC inhibit or modulate over-expression of, e.g. VIP. A wide range of cancer
 CC cells express receptors for VIP, somatostatin, bombesin and/or substance
 CC P. The present sequence represents VIP receptor-binding inhibitor
 CC (VIP2).

XX Novel therapeutically active composition comprising at least 5
 PT peptides, useful for treating angiogenesis especially as a result of
 PT adenocarcinomas -

PS Disclosure; Page 8; 42pp; English.

XX The present sequence represents an analogue of vasoactive intestinal
 CC peptide (VIP). The specification describes therapeutically active

CC compositions comprising at least one analogue of somatostatin (chosen
 CC from SOM1 and SOM2), and at least four analogues chosen from VIP1 (a
 CC VIP antagonist), VIP2 (a VIP receptor binding inhibitor), VIP3 (a VIP
 CC receptor antagonist), BOM1 (a bombesin antagonist), and SP1 (a substance
 CC P antagonist). The combination of these 7 analogues is known as MuJ-7.
 CC MuJ-7 is used as an anticancer drug to restrict tumour growth and spread
 CC by inhibiting tumour angiogenesis. MuJ-7, in addition, inhibits
 CC metastasis through its angiogenic activity in all cancers. The
 CC peptides are useful for the treatment and prevention of angiogenesis,
 CC especially, as a result of adenocarcinomas of the colon, breast, lung,
 CC prostate, kidney, leukemias or lymphomas.

XX

CC AAF22316 to AAF22363 encode the human secreted proteins given in AAB63049
CC to AAB63096. AAB63097 to AAB63132 represent more human secreted proteins
CC and polypeptides homologous to them. Human secreted proteins have
CC activities based on the tissues and cells the genes are expressed in.
CC Examples of activities include: immunosuppressive; antiarthritic;
CC antirheumatic; antiproliferative; cytostatic; cardiant; vasotrophic;
CC cerebroprotective; neurotropic; neuroprotective; antibacterial; virucide;
CC fungicide; ophthalmological; and vulnary. The polynucleotides and
CC proteins can be used to prevent, treat or ameliorate a medical condition
CC in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or
CC sheep. They are also used in diagnosing a pathological condition or
CC susceptibility to a pathological condition. Disorders which are diagnosed
CC or treated include autoimmune diseases e.g. rheumatoid arthritis,
CC hyperproliferative disorders e.g. neoplasms of the breast or liver,
CC cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders
CC e.g. cerebral ischaemia, angiogenesis caused by bacteria, viruses and fungi
CC Alzheimer's disease, infections caused by bacteria, viruses and fungi
CC ocular disorders e.g. corneal infection. The polypeptides can also be
CC used to aid wound healing and epithelial cell proliferation, to prevent
CC skin aging due to sunburn, to maintain organs before transplantation, for
CC supporting cell culture of primary tissues, to regenerate tissues and in
CC chemotaxis. The polypeptides can also be used as a food additive or
CC preservative to increase or decrease storage capabilities, fat content,
CC lipid, protein, carbohydrate, vitamins, minerals, cofactors and other
CC nutritional components. AAF22307 to AAF22315 and AAB63048 represent
CC sequences used in the exemplification of the present invention.

 PT prevention, diagnosis and treatment of cell proliferative, neurological
 PT and immune disorders -

XX Claim 1; Page 65-67; 71pp; English.

XX The invention provides human G protein coupled protein receptor (HGPRP)
 CC polypeptides and polynucleotides encoding them. The polypeptides can be
 CC produced by standard recombinant methodology. The polynucleotides and
 CC polypeptides may be used in the prevention, treatment and diagnosis of
 CC diseases associated with their inappropriate expression. Diseases that
 CC can be treated are cell proliferative disorders (e.g. arteriosclerosis,
 CC atherosclerosis and hepatitis), cancers (e.g. leukemia, melanomas and
 CC adenocarcinoma), immune disorders (e.g. anemia, asthma and Crohn's
 CC disease) and neurological disorders (e.g. epilepsy, Alzheimer's disease
 CC and Parkinson's disease). The anti-HGPRP antibodies may also be used as
 CC diagnostic agents for detecting the presence of HGPRP polypeptides in
 CC samples (e.g. by enzyme linked immunosorbent assay (ELISA)). Sequences
 CC AAY57283-288 represent the HGPRP polypeptides.

XX New gelatinase truncated mutant useful for treating disorders requiring
XX the removal of excess connective tissue, e.g. keloids, post-operative
XX fibrosis, intervertebral disc injections, hypertrophic scars

XX Example; Column 13-16; l1pp; English.

XX The present invention describes a cDNA sequence which encodes the
CC truncated mutant of the 92 kDa gelatinase having an amino acid sequence
CC as given in AAB74617 consisting of residues 106-216 fused to residues
CC 391-443 of the parent molecule. The truncated mutant has dermatological
CC and vulvular activities. The truncated mutant is useful for treating
CC disorders requiring the removal of excess connective tissue,
CC e.g., keloids, post-operative fibrosis, intervertebral disc injections,
CC hypertrophic scars, wound debridement, post-surgical adhesions and
CC various fibrotic diseases (including scleroderma, idiopathic pulmonary
CC fibrosis). The truncated mutant is catalytically active compared to
CC the full protein. Unlike the full protein, the truncated mutant is
CC essentially inactive against insoluble elastin, and does not require
CC activation to be enzymatically active. The present sequence represents
CC a 72 kDa gelatinase catalytic domain (72 CD) containing protein, which
CC is given in the exemplification of the present invention.

XX New truncated mutant of 92 kDa gelatinase which is catalytically
PT active, but is inactive against insoluble elastin, useful for treating
PT disorders requiring the removal of excess connective tissues such as
PT keloids

XX Examples; Fig 2; l1pp; English.

XX The present invention relates to a truncated mutant (92 CD) of the 92
CC kilo Dalton (kDa) gelatinase (see AAB68681). The truncated protein is
CC useful for treating disorders requiring the removal of excess connective
CC tissue, e.g. keloids, post-operative fibrosis, intervertebral disc
CC injections, hypertrophic scars, wound debridement, post-surgical
CC adhesions and various fibrotic diseases (scleroderma, idiopathic
CC pulmonary fibrosis). Gelatinase is a matrix metalloproteinase and is also
CC known as gelatinase B and MMP-9. The truncated protein is catalytically
CC active comparable to the full protein but unlike the full protein is
CC essentially inactive against insoluble elastin. The present sequence is
CC the catalytic domain of matrilysin, which was used in a sequence homology
CC alignment with the 92 CD protein of the present invention. Matrilysin is
CC also a matrix metalloproteinase.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Composition containing analogues of vasoactive intestinal peptide,
XX
somatostatin - bombesin and substance P, for treatment of tumours
XX
and for inhibiting over-expression of these peptide(s)

PS Claim 1; Page 4; 49pp; English.

XX The invention relates to a new composition which comprises: (i) the
 CC somatostatin analogue SOM2 AGCKNFRDWKPTSDC (3-14 disulphide bridge),
 CC and (ii) at least 4 of the peptides: antagonist of vasoactive
 CC intestinal peptide (VIP1); VIP receptor-binding inhibitor (VIP2); VIP
 CC receptor antagonist (VIP3); somatostatin analogue (SOM1); bombesin
 CC antagonist (BOM1) and substance P antagonist (SPI). Also claimed are
 CC more general compositions containing peptide analogues of somatostatin,
 CC VIP, bombesin and substance P. The compositions are used in human or
 CC veterinary medicine: (a) to kill (or inhibit multiplication of) tumour
 CC or cancer cells, particularly for treatment of leukaemia, lymphoma,
 CC adenocarcinoma of stomach, pancreas or prostate, or cancer of lung,
 CC breast, kidney or particularly rectum and colon; and (b) to prevent,
 CC inhibit or modulate over-expression of, e.g. VIP. A wide range of cancer
 CC cells express receptors for VIP, somatostatin, bombesin and/or substance
 CC P. The present sequence represents VIP receptor-binding inhibitor
 CC (VIP2).

 DR Novel therapeutically active composition comprising at least 5
 PT peptides, useful for treating angiogenesis especially as a result of
 PT adenocarcinomas -
 XX
 XX Disclosure; Page 8; 42pp; English.
 PS The present sequence represents an analogue of vasoactive intestinal
 CC peptide (VIP). The specification describes therapeutically active

CC compositions comprising at least one analogue of somatostatin (chosen
 CC from SOM1 and SOM2), and at least four analogues chosen from VIP1 (a
 CC VIP antagonist), VIP2 (a VIP receptor binding inhibitor), VIP3 (a VIP
 CC receptor antagonist), BOM1 (a bombesin antagonist), and SPI (a substance
 CC P antagonist). The combination of these 7 analogues is known as MuJ-7.
 CC MuJ-7 is used as an anticancer drug to restrict tumour growth and spread
 CC by inhibiting tumour angiogenesis. MuJ-7, in addition, inhibits
 CC metastasis through its antiangiogenic activity in all cancers. The
 CC peptides are useful for the treatment and prevention of angiogenesis,
 CC especially as a result of adenocarcinomas of the colon, breast, lung,
 CC prostate, kidney, leukemias or lymphomas.

 XX New nucleic acid molecules encoding 48 human secreted proteins for
 XX diagnosing, preventing, treating or ameliorating medical conditions and
 XX used as food additives or preservatives -
 XX
 XX Disclosure; Page 453-455; 480pp; English.

CC AAF22316 to AAF22363 encode the human secreted proteins given in AAB63049
 CC to AAB63096. AAB63097 to AAB63132 represent more human secreted proteins
 CC and peptides homologous to them. Human secreted proteins have
 CC activities based on the tissues and cells the genes are expressed in.
 CC Examples of activities include: immunosuppressive; antiarthritic;
 CC antihemetic; antiproliferative; cytostatic; cardiant; vasotropic;
 CC cerebroprotective; neurotropic; neuroprotective; antibacterial; virucide;
 CC fungicide; ophthalmological; and vulnary. The polynucleotides and
 CC proteins can be used to prevent, treat or ameliorate a medical condition
 CC in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or
 CC sheep. They are also used in diagnosing a pathological condition or
 CC susceptibility to a pathological condition. Disorders which are diagnosed
 CC or treated include autoimmune diseases e.g. rheumatoid arthritis,
 CC hyperproliferative disorders e.g. neoplasms of the breast or liver,
 CC cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders
 CC e.g. cerebral ischaemia, infectious diseases caused by bacteria, viruses and fungi and
 CC Alzheimer's disease. Infections caused by bacteria, viruses and fungi are
 CC ocular disorders e.g. corneal infection. The polypeptides can also be
 CC used to aid wound healing and epithelial cell proliferation, to prevent
 CC skin aging due to sunburn, to maintain organs before transplantation, for
 CC supporting cell culture of primary tissues, to regenerate tissues and in
 CC chemotaxis. The polypeptides can also be used as a food additive or
 CC preservative to increase or decrease storage capabilities, fat content,
 CC lipid, protein, carbohydrate, vitamins, minerals, and other
 CC nutritional components. AAF22307 to AAF22315 and AAB63048 represent
 CC sequences used in the exemplification of the present invention.

PT Human G protein coupled protein receptor peptides useful for the
 PT prevention, diagnosis and treatment of cell proliferative, neurological
 PT and immune disorders -

XX
 PS Claim 1; Page 65-67; 71pp; English.

XX
 CC The invention provides human G protein coupled protein receptor (HGPRP)
 CC polypeptides and polynucleotides encoding them. The polypeptides can be
 CC produced by standard recombinant methodology. The polynucleotides and
 CC polypeptides may be used in the prevention, treatment and diagnosis of
 CC diseases associated with their inappropriate expression. Diseases that
 CC can be treated are cell proliferative disorders (e.g. arteriosclerosis,
 CC atherosclerosis and hepatitis), cancers (e.g. leukemia, melanoma and
 CC adenocarcinoma), immune disorders (e.g. anemia, asthma and Crohn's
 CC disease) and neurological disorders (e.g. epilepsy, Alzheimer's disease
 CC and Parkinson's disease). The anti-HGPRP antibodies may also be used as
 CC diagnostic agents for detecting the presence of HGPRP polypeptides in
 CC samples (e.g. by enzyme linked immunosorbent assay (ELISA)). Sequences
 CC AAY57283-288 represent the HGPRP polypeptides.

XX Identifying compounds which modulate tub protein activity - by
 PT detecting compounds which alter the interaction of tub protein with
 PT a SH2 containing peptide, used to develop agents for treating e.g.
 PT obesity, cachexia or anorexia

XX Disclosure; Column 13; 95pp; English.

XX This sequence represents a tyrosine phosphorylation site/SH2 docking
 CC domain found in the amino acid sequence of the mouse and human "tub"
 CC proteins (AAW75450 and AAW75451 respectively). The invention relates to
 CC a method for identifying compounds that modulate tub protein activity,
 CC especially its interaction with proteins containing an SH2 domain. The
 CC method can be used for identifying compounds which modulate tub protein
 CC activity for use in the treatment of mammalian body weight disorders
 CC including obesity, cachexia and anorexia.

DR New gelatinase truncated mutant useful for treating disorders requiring
 the removal of excess connective tissue, e.g. keloids, post-operative
 fibrosis, intervertebral disc injections, hypertrophic scars

XX Example; Column 13-16; l1pp; English.

CC The present invention describes a cDNA sequence which encodes the
 truncated mutant of the 92 kDa gelatinase having an amino acid sequence
 as given in AAB74617 consisting of residues 106-216 fused to residues
 391-443 of the parent molecule. The truncated mutant has dermatological
 and vulnary activities. The truncated mutant is useful for treating
 disorders requiring the removal of excess connective tissue,
 e.g., keloids, post-operative fibrosis, intervertebral disc injections,
 hypertrophic scars, wound debridement, post-surgical adhesions and
 various fibrotic diseases (including scleroderma, idiopathic pulmonary
 fibrosis). The truncated mutant is catalytically active compared to
 the full protein. Unlike the full protein, the truncated mutant is
 essentially inactive against insoluble elastin, and does not require
 activation to be enzymatically active. The present sequence represents
 a 72 kDa gelatinase catalytic domain (72 CD) containing protein, which
 is given in the exemplification of the present invention.

XX New truncated mutant of 92 kDa gelatinase which is catalytically
 active, but is inactive against insoluble elastin, useful for treating
 disorders requiring the removal of excess connective tissues such as
 keloids

XX Examples; Fig 2; l1pp; English.

XX The present invention relates to a truncated mutant (92 CD) of the 92
 kilo Dalton (kDa) gelatinase (see AAB58681). The truncated protein is
 useful for treating disorders requiring the removal of excess connective
 tissue, e.g. keloids, post-operative fibrosis, intervertebral disc
 injections, hypertrophic scars, wound debridement, post-surgical
 adhesions and various fibrotic diseases (scleroderma, idiopathic
 pulmonary fibrosis). Gelatinase is a matrix metalloproteinase and is also
 known as gelatinase B and MMP-9. The truncated protein is catalytically
 active comparable to the full protein but unlike the full protein is
 essentially inactive against insoluble elastin. The present sequence is
 the catalytic domain of matrilysin, which was used in a sequence homology
 alignment with the 92 CD protein of the present invention. Matrilysin is
 also a matrix metalloproteinase.

CC -!- FUNCTION: REQUIRED FOR TRANSPORT OF SECRETORY PROTEINS FROM THE

GOLGI COMPLEX. CATALYZES THE TRANSFER OF PHOSPHATIDYLINOSITOL AND

PHOSPHATIDYLCHOLINE BETWEEN MEMBRANES IN VITRO (BY SIMILARITY).

CC -!- PERIPHERAL LOCATION: ASSOCIATED WITH THE GOLGI COMPLEX AS A

PERIPHERAL MEMBRANE PROTEIN (BY SIMILARITY).

CC -!- SIMILARITY: BELONGS TO THE SEC14 CYTOSOLIC FACTOR FAMILY.

XX XX

PS Claim 1; Page 4; 49pp; English.

XX The invention relates to a new composition which comprises: (i) the
 CC somatostatin analogue SOM2 AGCKNFFdWKPTSDC (3-14 disulphide bridge),
 CC and (ii) at least 4 of the peptides: antagonist of vasoactive
 CC intestinal peptide (VIP1); VIP receptor-binding inhibitor (VIP2); VIP
 CC receptor antagonist (VIP3); somatostatin analogue (SOM1); bombesin
 CC antagonist (BOM1) and substance P antagonist (SP1). Also claimed are
 CC more general compositions containing peptide analogues of somatostatin,
 CC VIP, bombesin and substance P. The compositions are used in human or
 CC veterinary medicine: (a) to kill (or inhibit multiplication of) tumour
 CC or cancer cells, particularly for treatment of leukaemia, lymphoma,
 CC adenocarcinoma of stomach, pancreas or prostate, or cancer of lung,
 CC breast, kidney or particularly rectum and colon; and (b) to prevent,
 CC inhibit or modulate over-expression of, e.g. VIP. A wide range of cancer
 CC cells express receptors for VIP, somatostatin, bombesin and/or substance
 CC P. The present sequence represents VIP receptor-binding inhibitor
 CC (VIP2).

 XX peptides, useful for treating angiogenesis especially as a result of
 PT adenocarcinomas -
 XX Disclosure; Page 8; 42pp; English.
 XX The present sequence represents an analogue of vasoactive intestinal
 CC peptide (VIP). The specification describes therapeutically active

CC compositions comprising at least one analogue of somatostatin (chosen
 CC from SOM1 and SOM2), and at least four analogues chosen from VIP1 (a
 CC VIP antagonist), VIP2 (a VIP receptor binding inhibitor), VIP3 (a VIP
 CC receptor antagonist), BOM1 (a bombesin antagonist), and SP1 (a substance
 CC P antagonist). The combination of these 7 analogues is known as MuJ-7.
 CC MuJ-7 is used as an anticancer drug to restrict tumour growth and spread
 CC by inhibiting tumour angiogenesis. MuJ-7, in addition, inhibits
 CC metastasis through its antiangiogenic activity in all cancers. The
 CC peptides are useful for the treatment and prevention of angiogenesis,
 CC especially as a result of adenocarcinomas of the colon, breast, lung,
 CC prostate, kidney, leukemias or lymphomas.

DR New nucleic acid molecules encoding 48 human secreted proteins for

XX diagnosing, preventing, treating or ameliorating medical conditions and

PT used as food additives or preservatives -

XX Disclosure; Page 453-455; 480pp; English.

CC AAF22316 to AAF22363 encode the human secreted proteins given in AAB63049

CC to AAB63096. AAB63097 to AAB63132 represent more human secreted proteins

CC and polypeptides homologous to them. Human secreted proteins have

CC activities based on the tissues and cells the genes are expressed in.

CC Examples of activities include: immunosuppressive; antiarthritic;

CC antineoplastic; antiproliferative; cytostatic; cardiant; vasotropic;

CC cerebroprotective; neurotropic; neuroprotective; antibacterial; virucide;

CC fungicide; ophthalmological; and vulnary. The polynucleotides and

CC proteins can be used to prevent, treat or ameliorate a medical condition

CC in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or

CC sheep. They are also used in diagnosing a pathological condition or

CC susceptibility to a pathological condition. Disorders which are diagnosed

CC treated include autoimmune diseases e.g. rheumatoid arthritis,

CC hyperproliferative disorders e.g. neoplasms of the breast or liver,

CC cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders

CC e.g. myocardial ischaemia, angiogenesis, nervous system disorders e.g.

CC Alzheimer's disease, infections caused by bacteria, viruses and fungi and

CC ocular disorders e.g. corneal infection. The polypeptides can also be

CC used to aid wound healing and epithelial cell proliferation, to prevent

CC skin aging due to sunburn, to maintain organs before transplantation, for

CC supporting cell culture of primary tissues, to regenerate tissues and in

CC chemotaxis. The polypeptides can also be used as a food additive or

CC preservative to increase or decrease storage capabilities, fat content,

CC lipid, protein, carbohydrate, vitamins, minerals, cofactors and other

CC nutritional components. AAF22307 to AAF22315 and AAB63048 represent

CC sequences used in the exemplification of the present invention.

XX

PT Human G protein coupled protein receptor peptides useful for the
 PT prevention, diagnosis and treatment of cell proliferative, neurological
 PT and immune disorders -

PS Claim 1; Page 65-67; 71pp; English.

XX
 XX The invention provides human G protein coupled protein receptor (HGPRP)
 CC polypeptides and polynucleotides encoding them. The polypeptides can be
 CC produced by standard recombinant methodology. The polynucleotides and
 CC polypeptides may be used in the prevention, treatment and diagnosis of
 CC diseases associated with their inappropriate expression. Diseases that
 CC can be treated are cell proliferative disorders (e.g. arteriosclerosis,
 CC atherosclerosis and hepatitis), cancers (e.g. leukemia, melanomas and
 CC adenocarcinoma), immune disorders (e.g. anemia, asthma and Crohn's
 CC disease) and neurological disorders (e.g. epilepsy, Alzheimer's disease
 CC and Parkinson's disease). The anti-HGPR antibodies may also be used as
 CC diagnostic agents for detecting the presence of HGPR polypeptides in
 CC samples (e.g. by enzyme linked immunosorbent assay (ELISA)). Sequences
 CC AAY57283-288 represent the HGPRP polypeptides.

XX Human brain-derived G-protein coupled receptor protein and encoding DNA
 PT used in gene therapy, is also useful for e.g. identifying ligands and
 PT raising antibodies and antisera -

XX Claim 1; Fig 1; 80pp; Japanese.

XX This represents a human brain-derived G-protein coupled receptor
 CC protein. The polypeptide can be expressed by standard recombinant
 CC methodology. The novel G-protein coupled receptor protein can be used
 CC for identifying ligands; raising antibodies and antisera; developing

CC receptor-binding assay system; and screening for drug candidates. The
 CC encoding polynucleotide can be used in; probing for diagnostic genes;
 CC constructing PCR primers; making transgenic animals; and in gene therapy.

XX Identifying compounds which modulate tub protein activity - by
 PT detecting compounds which alter the interaction of tub protein with
 PT a SH2 containing peptide, used to develop agents for treating e.g.
 PT obesity, cachexia or anorexia

XX Disclosure; Column 13; 95pp; English.

XX This sequence represents a tyrosine phosphorylation site/SH2 docking
 CC domain found in the amino acid sequence of the mouse and human "tub"
 CC proteins (AAW75450 and AAW75451 respectively). The invention relates to
 CC a method for identifying compounds that modulate tub protein activity,
 CC especially its interaction with proteins containing an SH2 domain. The
 CC method can be used for identifying compounds which modulate tub protein
 CC activity for use in the treatment of mammalian body weight disorders
 CC including obesity, cachexia and anorexia.

XX New nucleic acids encoding human secreted proteins - obtained from
PT cDNA libraries prepared from kidney, fetal kidney, dystrophic
PT muscle, muscle and heart tissue
XX
XX Claim 34; Page 598; 622pp; English.

AAAX40826 to AAX41093 represent 5' expressed sequence tags (ESTs) for
CC human secreted proteins and encode the proteins given in AAY01602 and
CC AAY11994 to AAY12260, respectively. The proteins given represent the
CC signal peptide and an N-terminal fragment of a secreted protein. The
CC nucleic acid sequences can be used for producing secreted human gene
CC products. They can also be used to develop products for diagnosis and
CC therapy. The proteins obtained may have cytokine activity, cell
CC proliferation/differentiation activity, haematopoiesis regulating
CC activity, tissue growth regulating activity, reproductive hormone
CC regulating activity, chemotactic/chemokinetic activity, anti-inflammatory
CC thrombolytic activity, receptor/ligand activity, anti-infective activity,
CC activity, tumour inhibition activity or other activities. The products
CC can be used in forensic, gene therapy and chromosome mapping procedures.
CC The sequences can also be used for obtaining coding promoter
CC sequences. The nucleic acids encoding the signal peptide can be used
CC for directing extracellular secretion of a polypeptide or the insertion
CC of a polypeptide into a membrane, or importing a polypeptide into
CC a cell.

● New gelatinase truncated mutant useful for treating disorders requiring
PT the removal of excess connective tissue, e.g. keloids, post-operative
PT fibrosis, intervertebral disc injections, hypertrophic scars

XX Example; Column 13-16; lipp; English.

XX The present invention describes a cDNA sequence which encodes the
CC truncated mutant of the 92 kDa gelatinase having an amino acid sequence
CC as given in AAB74617 consisting of residues 106-216 fused to residues
CC 391-443 of the parent molecule. The truncated mutant has dermatological
CC and vulvular activities. The truncated mutant is useful for treating
CC disorders requiring the removal of excess connective tissue,
CC e.g., keloids, post-operative fibrosis, intervertebral disc injections,
CC hypertrophic scars, wound debridement, post-surgical adhesions and
CC various fibrotic diseases (including scleroderma, idiopathic pulmonary
CC fibrosis). The truncated mutant is catalytically active compared to
CC the full protein. Unlike the full protein, the truncated mutant is
CC essentially inactive against insoluble elastin, and does not require
CC activation to be enzymatically active. The present sequence represents
CC a 72 kDa gelatinase catalytic domain (72 CD) containing protein, which
CC is given in the exemplification of the present invention.

XX New truncated mutant of 92 kDa gelatinase which is catalytically
XX active, but is inactive against insoluble elastin, useful for treating
XX disorders requiring the removal of excess connective tissues such as
XX keloids

XX Examples; Fig 2; lipp; English.

XX The present invention relates to a truncated mutant (92 CD) of the 92
CC kDa gelatinase (see AAB68681). The truncated protein is
CC useful for treating disorders requiring the removal of excess connective
CC tissue, e.g. keloids, post-operative fibrosis, intervertebral disc
CC injections, hypertrophic scars, wound debridement, post-surgical
CC adhesions and various fibrotic diseases (scleroderma, idiopathic
CC pulmonary fibrosis). Gelatinase is a matrix metalloproteinase and is also
CC known as gelatinase B and MMP-9. The truncated protein is catalytically
CC active comparable to the full protein but unlike the full protein is
CC essentially inactive against insoluble elastin. The present sequence is
CC the catalytic domain of matrilysin, which was used in a sequence homology
CC alignment with the 92 CD protein of the present invention. Matrilysin is
CC also a matrix metalloproteinase.

PT Isolated nucleic acid encoding human metallo-protease(s) - used for
 PT diagnosis, treatment and prevention of, e.g. cancer, inflammation,
 PT neurological disease and infections

PS Claim 20a; Fig 4; 81pp; English.

XX This sequence represents a novel human matrilysin-like protein which is
 CC an inhibitor of the members of the matrix metalloproteinase, MMP,
 CC family. This protein can be used in assays to screen for agonists and
 CC antagonists and the nucleic acid is used as a probe for gene mapping, in
 CC situ hybridisation and detection of corresponding genes in human tissue,
 CC and as sources of probes and primers for diagnosis. The protein and its
 CC antigenic fragments are used to raise antibodies (Ab) (which can be used
 CC for diagnosis in usual immunoassays or for in vivo imaging) and to screen
 CC for (ant)agonists. Agonists can be used to treat cancer or other
 CC conditions associated with underexpression of TNF-alpha. Antagonists are
 CC used to treat diseases associated with degeneration of the extracellular
 CC matrix (cancer, arthritis, cardiovascular disease, cachexia and multiple
 CC sclerosis).

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
